Project

Expense Tracker App

Sprint

Sprint 1

Sprint Review Objective

The objective of the Sprint Review is to inspect the completed product increment, gather stakeholder feedback, and identify changes or enhancements that should be added to the Product Backlog.

Meeting Information

- Meeting Type: Sprint Review
- Duration: 60 Minutes
- Sprint: Sprint 1
- Facilitator: Product Manager
- Date: End of Sprint 1

Deliverable: 3 – A Short Note

Why PMs Who Skip Retrospectives Always Repeat the Same Mistakes

Sprint Retrospectives are one of the most important events in Agile because they focus on continuous improvement. While Sprint Reviews evaluate the product, Retrospectives evaluate how the team worked and identify opportunities to improve future performance.

When Product Managers skip retrospectives, teams lose the opportunity to learn from sprint outcomes. Problems such as unclear requirements, poor communication, recurring blockers, inaccurate estimates, and dependency issues often remain unresolved. As a result, the same issues continue to appear in future sprints.

Retrospectives help teams identify process weaknesses and understand what is helping or slowing down delivery. By discussing what should start, stop, and continue, teams can create actionable improvements instead of repeating ineffective practices.

Retrospectives also prevent recurring problems by assigning ownership to improvement actions and tracking them in subsequent sprints. This creates accountability and ensures lessons learned are converted into measurable changes.

Over time, regular retrospectives improve team collaboration, communication, planning accuracy, and overall productivity. Teams become better at identifying risks early, removing blockers, and delivering value consistently.

In conclusion, PMs who skip retrospectives often repeat the same mistakes because they fail to analyze and improve their processes. Retrospectives provide the feedback loop necessary for continuous improvement and long-term team success.

Sprint Review

Product-focused

Team + Stakeholders attend

Reviews completed work

Generates product feedback

Updates Product Backlog

Sprint Retrospective
