

# Deliverable 1&2:

## PM Prompt Library

## Before vs After AI MoM Comparison

By Rudraksh Mishra 3 min Listen

### PM Prompt Library

#### 1. BRD Drafting

##### Prompt:

Create a Business Requirements Document for an Expense Tracker App. Include business objectives, stakeholders, functional requirements, non-functional requirements, assumptions, and constraints.

##### Example Output:

A structured BRD containing objectives, requirements, stakeholders, assumptions, and success criteria.

#### 2. PRD User Story Generation

##### Prompt:

Generate user stories for an Expense Tracker App with acceptance criteria for registration, login, and expense management features.

##### Example Output:

###### User Story:

As a user, I want to register an account so that I can securely access my expense data.

###### Acceptance Criteria:

- User can enter email and password.
- Registration confirmation is displayed.
- User data is stored successfully.

## Deliverable 2: Before vs After AI MoM Comparison

### Raw Notes

- Sprint 1 review meeting
- Login feature completed
- Dashboard feature delayed
- Waiting for API approval
- QA testing started
- Next meeting Friday

### Formal Business Meeting Minutes

#### I. Meeting Information:

- Date: April 16, 2020
- Time: 10:00 AM - 11:30 AM
- Location: Conference Room A, [YOUR COMPANY NAME]

#### II. Attendees:

- Chairperson: Mr. Robert Johnson
- Secretary: [YOUR NAME]
- Finance Director: Mr. James Miller
- Marketing Manager: Ms. Sarah Clark
- Product Development Lead: Mr. David Brown
- Sales Manager: Mr. Jennifer Lee

## **Deliverable 3: 3 PM Tasks Where AI Helps and 3 Where It Cannot Replace Human Judgment**

### **3 PM Tasks Where AI Genuinely Helps**

#### **1. Documentation Drafting**

AI can quickly generate BRDs, PRDs, project plans, status reports, and meeting summaries, saving significant time.

#### **2. Meeting Summarization**

AI can convert raw notes and transcripts into structured Minutes of Meeting with action items and decisions.

#### **3. Risk Brainstorming**

AI can suggest potential project risks and mitigation strategies that PMs can review and refine.

---

### **3 PM Tasks Where AI Cannot Replace Human Judgment**

#### **1. Stakeholder Negotiation**

AI cannot understand organizational politics, stakeholder personalities, or business relationships well enough to negotiate effectively.

#### **2. Prioritization Decisions**

AI can suggest priorities, but only PMs understand business goals, customer needs, market conditions, and strategic trade-offs.

#### **3. Conflict Resolution**

Resolving disagreements between stakeholders, teams, or departments requires emotional intelligence and human judgment that AI cannot provide.

---

### **Conclusion**

AI is a powerful productivity tool that helps Product Managers work faster and create higher-quality documentation. However, it cannot replace human

judgment, stakeholder management, decision-making, or leadership. The most effective PMs use AI to accelerate execution while retaining ownership of critical decisions.
