

Deliverable 1: Complete BRD

Business Requirements Document: HR Leave Management System

1. Executive Summary

The organization currently manages employee leave requests manually through emails and paper forms. This process is time-consuming and prone to errors. The HR Leave Management System will automate leave applications, approvals, notifications, and record management.

2. Business Objectives

1. Reduce manual paperwork.
 2. Improve leave approval efficiency.
 3. Maintain accurate leave records.
 4. Increase employee satisfaction.
 5. Enable real-time leave tracking.
 6. Reduce HR administrative workload.
-

3. Scope

In Scope

- Leave application
- Leave approval workflow
- Leave balance tracking
- Email notifications
- HR reporting

Out of Scope

- Payroll processing
- Attendance tracking
- Recruitment management

<u>Stakeholder</u>	<u>Role</u>
Employees	Submit leave requests
Managers	Approve or reject requests
HR Team	Monitor and manage records
IT Team	Develop and maintain system
Project Manager	Coordinate project
Senior Management	Approve project budget

5. Current Process

Current leave management is performed using:

- Paper forms
- Email approvals
- Spreadsheet tracking

Challenges:

- Delayed approvals
- Lost records
- Manual calculations
- Lack of visibility

6. Proposed Solution

Develop a web-based leave management system allowing employees, managers, and HR personnel to manage leave requests digitally.

Features:

- Online leave application
- Automated approval workflow
- Real-time leave balance
- Email notifications

- Reporting dashboard
-

7. Requirements

Business Requirements

- BR-1: Employees must apply for leave online.
- BR-2: Managers must approve/reject requests digitally.
- BR-3: HR must access leave records centrally.
- BR-4: Employees must view leave balance.
- BR-5: System must maintain leave history.
- BR-6: Management must access leave reports.
- BR-7: Leave calculations must be automated.
- BR-8: Approval status must be visible to employees.
-

Functional Requirements

- FR-1: System shall provide employee login.
- FR-2: System shall allow leave application submission.
- FR-3: System shall send approval notifications.
- FR-4: System shall allow managers to approve/reject requests.
- FR-5: System shall update leave balance automatically.
- FR-6: System shall generate reports.
- FR-7: System shall store leave history.
- FR-8: System shall support role-based access.
-

Non-Functional Requirements

- NFR-1: Response time shall not exceed 2 seconds.
- NFR-2: System shall support 500 concurrent users.
- NFR-3: System availability shall be 99.9%.
- NFR-4: Data shall be encrypted during transmission.

NFR-5: System shall support modern browsers.

8. Assumptions

- 1. Employees have internet access.
 - 2. Company email accounts exist.
 - 3. Managers regularly review requests.
 - 4. Existing employee records are accurate.
 - 5. Necessary infrastructure is available.
-

9. Constraints

- 1. Project budget limited to ₹10,00,000.
 - 2. Project duration limited to 4 months.
 - 3. Existing HR database must be reused.
 - 4. Compliance with company security policies.
 - 5. Limited IT staff availability.
-

10. Sign-Off

Name	Role	Signature	Date
HR Head	Sponsor	_____	_____
Project Manager	Project Lead	_____	_____
IT Manager	Technical Lead	_____	_____

Deliverable 2: Short Note

Why a Poorly Written BRD is the #1 Cause of Project Failure

A poorly written BRD creates ambiguity regarding project goals, scope, and stakeholder expectations. When requirements are unclear or incomplete, development teams may build features that do not address actual business needs. This leads to frequent requirement changes, scope creep, increased costs, project delays, and stakeholder dissatisfaction. Without a clear BRD, communication gaps emerge between business users and technical teams, resulting in rework and wasted resources. A well-written BRD serves as the foundation of successful project execution by ensuring that all stakeholders share the same understanding of objectives, requirements, assumptions, and constraints before development begins.
