Deliverable 3 (Short Note)

Product Backlog vs Sprint Backlog

Product Backlog

Contains all requirements, features, enhancements, and fixes planned for the product.

Continuously updated and prioritized by the Product Owner.

Long-term planning tool.

Includes future work items.

Represents the entire product vision.

Sprint Backlog

Contains only the items selected for the current sprint.

Fixed for the duration of the sprint except in exceptional cases.

Short-term execution plan.

Includes work to be completed during the current sprint.

Represents the sprint commitment of the team.
